

FIELD TRIP

ECollaboration staff will take us to one of their field sites on Whalley Creek in the Nambour urban area, sharing and demonstrating their passion for a healthy ecosystem. They train many young people giving them hands-on experience and developing within them a commitment to ensuring a healthy environment within our city.

DILKUSHA RAINFOREST

Over 40 years ago some Uniting Church ministers and their wives bought an old dairy farm, and set about rehabilitating the land to its original rain forest. You will be impressed, but you will learn from them something of the remarkable body of knowledge they have gained in the process.

NICHOLS WORM FARM

Rob Nichols having retired from teaching science has established a remarkable worm farm. Waste from a brewery feeds a dairy herd, and their waste feeds the worms. Worms rehabilitate soil which becomes an excellent store of carbon.
